Cuisenaire squares

I notice a pattern. It starts with 4 small white squares making a big square. In the next square, the white square is in the middle and 4 red rectangles are around it making a even bigger square. In the next square, the red rectangle is in the middle but since the square has to be bigger, instead of one, there is two red rectangles. Around them, there is 4 green rectangles a little bigger than the red one. It will repeat the same thing, forming squares, on bigger than the other!

I wonder if it can go to infinity! It would be really cool to see millions of formed squares!

I would describe it as a variety of squares with different sizes.

This are the squares that I assume that comes next according to the pattern:
