

The Number Jumbler

The draws of the numbers change in each game that you play. But, there are 9 numbers that have the same draw among them.

The numbers are : 9 - 18 - 27 - 36 - 45 - 54 - 63 - 72 - 81.

All the numbers are multiples of 9.

You can think in any number between 10 and 19, and it will be 9. Ex: I think the number 13 $\rightarrow 1 + 3 = 4 \rightarrow 13 - 4 = \underline{9}$

Now, you think a number between 20 and 29, and it will be 18. Ex: I think the number 29 $\rightarrow 2 + 9 = 11 \rightarrow 29 - 11 = \underline{18}$

If you think a number between 30 and 39, it will be 27. Ex: I think the number 31 $\rightarrow 3 + 1 = 4 \rightarrow 31 - 4 = \underline{27}$

If you think a number between 40 and 49, it will be 36. Ex: I think the number 45 $\rightarrow 4 + 5 = 9 \rightarrow 45 - 9 = \underline{36}$

If you think a number between 50 and 59, it will be 45. Ex: I think the number 50 $\rightarrow 5 + 0 = 5 \rightarrow 50 - 5 = \underline{45}$

If you think a number between 60 and 69, it will be 54. Ex: I think the number 66 $\rightarrow 6 + 6 = 12 \rightarrow 66 - 12 = \underline{54}$

If you think a number between 70 and 79, it will be 63. Ex: I think the number 78 $\rightarrow 7 + 8 = 15 \rightarrow 78 - 15 = \underline{63}$

If you think a number between 80 and 89, it will be 72. Ex: I think the number 84 $\rightarrow 8 + 4 = 12 \rightarrow 84 - 12 = \underline{72}$

Or if you think a number between 90 and 99, it will be 81. Ex: I think the number 99 $\rightarrow 9 + 9 = 18 \rightarrow 99 - 18 = \underline{81}$

You can check all the numbers and surely it will give you the multiples of 9, and they have the same pictures.
