

Square it

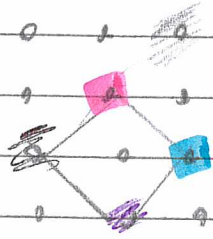

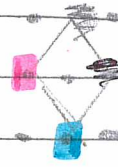

Some people think it's impossible to find a method that works everytime against the computer. Well, it's very much possible. I've found a trick to win! You wanna hear it? But before ~~to~~ I tell you have to go ~~first~~ ^{first} for this to work.

So when you start you will click on the middle dot, then click on the dot diagonal up ~~down~~ or left or right or down left or right. After, click on the dot 2 down or if you went up ~~or~~ down on the last step go 2 up. Now, go left 2 or right 2 depending where you are now. Now, ~~last~~ if you can make a diamond (which is a square on an angle) otherwise keep going so you can make a diamond. Here are some diagrams to show more detail.

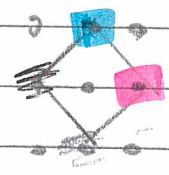

Key  second step  fifth step
 = first step  third step
 fourth step

or

or

So there's lots of ~~way~~ ways to do this as you can see. So go try it and win!
