How does each method work?

| Method | advantage | disadvantage |
|-------------------|--|--|
| Grid | Easy to understand | Takes some time to draw the grid |
| Column | A fast way to do multiplication | Allot more numbers than all of them |
| Multiplying lines | A challenge for people that are determan | Very complicated method Takes a long time to do |
| Gelosia | It's very simple | You might get mixed up for multiplying the numbers |

What do they all have in common?

In the end you add up the numbers or make a number using individual units.
