Pythagorean Triples

Age 9

In Charlie's triples

$$B(P+1)^2 = P^2 + B^2$$

$$\text{or } P^2 + 2P + 1 = P^2 + B^2$$

$$\text{or } 2P + 1 = B^2$$

$$\text{or } B = \sqrt{2P+1}$$

$$P, B \in \mathbb{R}, P, B \geq 0$$

$\therefore$  Perpendicular =  $P$ , Hypotenuse =  $P+1$ , Base =  $\sqrt{2P+1}$ .  
The above proves this.

In Alison's triples

$$(P+2)^2 = P^2 + B^2$$

$$\text{or } P^2 + 4 + 4P = P^2 + B^2$$

$$\text{or } B^2 = 4 + 4P$$

$$\text{or } B = \sqrt{4 + 4P} = 2\sqrt{1+P}$$

$\therefore$  Perpendicular =  $P$ , Hypotenuse =  $P+2$ , Base =  $2 + 2P = 2(1+P)$ .  
The above proves this.

$$\text{When } (P+n)^2 = P^2 + B^2$$

$$B^2 = n^2 + 2Pn$$

$$\text{or } B = \sqrt{n(n+2P)}$$

$\therefore$  Perpendicular =  $P$  Hypotenuse =  $P+n$  Base =  $\sqrt{n(n+2P)}$

Here  $P \geq 0$

If  $B \in \mathbb{Z}^+$

Then in Charlie's triples

$2P+1 = x^2$ ,  $x \in \mathbb{Z}^+$ ,  $P \in \mathbb{Z}^+$  when  $x^2-1$  is even and  $P \notin \mathbb{Z}^+$  if  $x^2-1$  is odd.

In Alison's triples

$P \in \mathbb{Z}^+$  when  $(P^2-4) \% 4 = 0$

And in general

$n^2 + 2pn = x^2$ ,  $x, n \in \mathbb{Z}^+$

$\therefore P \in \mathbb{Z}^+$  if  $(x^2-n^2) \% 2n = 0$
